## **Parabolic concentrators : General Industrial Applications**

- Waste Water / Desalination
- Hot Water & Ind. Boiler Feed Water
- Pressurized Hot Water
- Thermic Fluid Heating Applications
- Steam Generation for Process & VAM
- Hot Water Generators for Various Applications
- Indirect Heating Applications – Drying
- Solar Steam Cooking for Canteens
- Incineration

To give you a detailed techno-commercial proposal for any of your application on solar thermal needs, we need the following details:

1. Exact location of the plant with address
2. Contact details of the plant In charge for taking any inputs if required
3. Brief detail of the present process to understand your application
4. Type of fuel used
5. Quantity of fuel used per hour
6. Price of fuel
7. GCV of fuel
8. Capacity of HWG / Boiler installed for heating water / generating steam or heating thermal oil
9. Efficiency of installed system
10. Total quantity of steam/ TFH/ hot water required per hour or day
11. Total hours the plant operates
12. If TFH is circulated then what is the Delta-T
13. Shadow free Space on terrace or available near the application.
