NET METERING

NET METERING POWER BILL = POWER USED FROM MAHADISCOM - SURPLUS POWER GENERATED FROM PANELS
(import meter) (export meter)

**No batteries needed to store or maintain
Every unused kWh is sold or credited back to utility.**

*Grid Tie Inverter is new technology that combines DC power from Solar Panels to Utility power so both can be used.
Net Metering works best if the solar system production is greater than daytime consumption. Surplus power credits can be used up at night.
